

Dura Industrial Secondary School

LETTER OF RECOMMENDATION

Ref:DIS/REC/2026/001

To:The Admissions and Scholarship Committee

Date:09 July 2026

Subject:University Admission & Scholarship (B.Sc. in Cybersecurity)

Dear Members of the Admissions Committee,

My name is **Eng. Anas Jamal Al-Hrinin**, Instructor of Applied Electricity at Dura Industrial Secondary School. I have had the distinct pleasure of teaching **Abdulaziz Adel Mohammad Al-Aqeili** for two consecutive academic years during his secondary industrial education (Grades 11 and 12), as well as directly supervising his graduation capstone project. Based on my close observation of his academic development and technical capabilities, I give my highest and most enthusiastic recommendation for his admission and scholarship endorsement into your Bachelor's program in Cybersecurity.

Intellectual Curiosity and Analytical Mindset

From the outset, Abdulaziz stood out as an exceptionally inquisitive, driven, and analytical student. He possesses a strong critical thinking capacity and is never afraid to intellectually defend his approaches during technical assignments. More importantly, he exhibits a high level of academic maturity and coachability; whenever a technical error is proven through data, he readily accepts the fact and adapts with grace. His unique classroom approach — characterized by deep, reflective listening before asking precise, high-level questions — demonstrates a sophisticated learning methodology vital for rigorous higher education.

Academic Transition and Purposeful Maturity

Abdulaziz initially entered the Electrical Applications track due to long-standing family encouragement. However, as he progressed, his true potential manifested in his ability to critically assess his own professional alignment. Recognizing that his passion lies within the computing realm, he decided to transition towards Cybersecurity. I strongly endorse this transition because it represents a calculated, strategic choice rather than an escape. His solid foundational background in electrical engineering will provide him with a significant competitive advantage in hardware security, firmware, and embedded system vulnerabilities.

Technical Competence & Capstone Excellence

I personally supervised Abdulaziz's graduation project: the design and assembly of an Automatic Transfer Switch (ATS) panel between dual power sources — a rigorous project requiring five months of continuous engineering work. Abdulaziz independently managed the procurement of components, physical mounting, intricate wiring schemas, and logical circuit separation. He successfully implemented a flawless electrical interlock system between dual contactors to prevent dangerous source paralleling, and precisely calibrated timer modules to ensure current stability before grid transfer.

What impressed me most was his immense resilience when encountering technical obstacles. When a complex system fault persisted for nearly two weeks, Abdulaziz displayed remarkable professional stamina. Instead of giving up, he systematically deconstructed the problem, re-evaluated his hypotheses, and sought feedback with targeted technical questions. This diagnostic perseverance and refusal to compromise on complete understanding are exactly the core traits required in the field of cybersecurity.

Extracurricular Technical Initiatives

Beyond his core curriculum, Abdulaziz demonstrated immense self-direction by collaborating with a mobile software engineer to repair and maintain laboratory operational hardware. This initiative, combined with his three-year track record of diagnosing and repairing computer hardware and software issues for his peers and community, illustrates his proactive engagement with technology and his readiness to excel in a demanding Computer Science environment.

Leadership, Citizenship, and Global Ambition

Abdulaziz's leadership traits were honed early during his three consecutive years as the President of the Student Discipline Committee at Yasser Arafat Secondary School (Grades 7–9). He also balances heavy personal responsibilities with high maturity, managing critical household logistics and supporting his family. Furthermore, his global awareness is underscored by his proactive registration in the European Solidarity Corps (ESC). For a student navigating the structural limitations of the West Bank, this step clearly reflects his ambition, resourcefulness, and readiness for international academic engagement.

It is also worth noting that Abdulaziz took the initiative to begin learning the basics of Kotlin programming on his own, despite being enrolled in an electrical track — a step that, although paused due to exam pressure, demonstrates a genuine curiosity that extends well beyond his assigned curriculum. He also volunteered his time to assist the school's mobile applications engineer in repairing compromised devices, including one infected with malware that had embedded itself deep in a computer's hard drive. While the technical assessment of that incident is best left to the applications engineer who worked alongside him, I can attest that Abdulaziz's willingness to cross the boundaries of his own specialization and engage with computing problems is exceptional for a student in the vocational track.

Conclusion

Abdulaziz Adel Al-Aqeili is not merely an applicant seeking a degree; he is a dedicated, resilient, and honest researcher who thrives under pressure and transforms technical challenges into learning milestones. His practical background in electrical systems, coupled with his technical awareness and early leadership, provides him with a robust foundation for success in cybersecurity. I am fully confident that his tenacity, technical foundation, and maturity will make him an exemplary asset to your institution. I recommend him for your prestigious program and scholarship with full confidence, and I am available should the Committee require any further information regarding his qualifications or character.

Sincerely,
